Coding & Solution

Date	01 October 2026
Team ID	SWTID-2026-3426
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	5 Marks

Coding & Solution

The solution is implemented primarily through ServiceNow configuration and Flow Designer automation. The design addresses the standard laptop procurement workflow with structured requests, validation, approvals, fulfillment tasks, notifications, and tracking.

Instructions:

1. Keep Flow Designer actions, conditions, data pills and subflows organized and clearly named.

2. Implement the core procurement workflow and the defined functional requirements.

3. Maintain configuration, flow documentation and setup information needed to reproduce the solution.

4. A public GitHub/GitLab repository link is not available in the supplied project information.

Solution Summary

Field	Details
Repository Link / URL	Not provided — ServiceNow configuration / Flow Designer artifacts
Programming Language(s)	ServiceNow Flow Designer expressions / JavaScript where required
Framework(s) Used	ServiceNow platform, Service Catalog, Flow Designer
Key Features Implemented	Laptop request form; validation; approval routing; notifications; fulfillment task creation; status tracking; audit records
Pending / Incomplete Features	Advanced reporting/dashboard enhancements
Setup / Run Instructions	Configure the catalog item, define required variables, create the Flow Designer trigger/actions, configure approval rules, notification steps, and fulfillment tasks; test using a standard laptop request.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	N/A — no repository link supplied

Additional Notes / Comments:

The solution is low-code/configuration driven. Flow Designer provides the main automation logic, while ServiceNow maintains requests, approvals, tasks, notifications and audit history. Repository information was not included in the supplied template/source material.
