PROJECT EXECUTABLE FILES – ANSWER

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Project / Team ID	SWTID-2026-3426
Submission Type	Project Executable Files

Step 1: Submission Checklist

S.No	Item	Answer / Status
1	Complete source code	Flow Designer workflow / project source files
2	README / Setup Guide	Setup and execution instructions to be provided with project
3	Dependency file	Not applicable / as required by the ServiceNow Flow Designer environment
4	Database schema / seed files	Not applicable unless custom tables/data are used
5	Environment configuration	ServiceNow instance configuration and required credentials/settings
6	Deployed application URL	ServiceNow instance URL – to be provided for evaluation
7	APK / Executable binary	Not applicable
8	Dockerfile / Containerization	Not applicable
9	Test files and results	Flow Designer test execution results / screenshots
10	Demo video / walkthrough	Project demonstration to be provided if required

Step 2: File / Folder Structure

Component	Purpose
Flow Designer Flow	Automates standard laptop order processing
Trigger / Request	Starts the workflow when a standard laptop request is submitted
Flow Actions	Validates request details, performs required processing, and routes the order
Approval / Assignment	Handles required approval and assignment steps
Notification	Sends status/confirmation notifications

Step 3: Deployment / Access Details

Field	Answer
Hosted / Deployed URL	ServiceNow instance URL – to be supplied
Login Credentials	Demo evaluator credentials – to be supplied securely
Platform / Provider	ServiceNow / Flow Designer
Repository Link	Not specified in the supplied source material
Demo Video Link	Not specified in the supplied source material

Step 4: Run Instructions

Step	Instruction
1	Open the configured ServiceNow instance.
2	Open Flow Designer.
3	Locate the standard laptop order automation flow.
4	Verify the trigger and request inputs.
5	Run/test the flow using a standard laptop request.
6	Verify validation, approval/assignment, order processing, and notifications.
7	Review execution details and confirm the expected outcome.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Requires a configured ServiceNow instance and Flow Designer access.	Use the configured evaluation instance.
2	Exact deployment URL and credentials are not present in the source document.	Provide evaluator access details separately.
3	Repository/demo links are not specified in the source.	Add them if available.
