Performance Testing – Answer

Project Name: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Team ID: SWTID-2026-3426
Date: 15 March 2026

Step 1: Testing Overview

Field	Details
Testing Tool Used	Postman
Type of Testing	Load Testing
Target Module / API	Standard Laptop Order Request / Flow Designer workflow
Test Environment	ServiceNow hosted environment
Test Date	15 March 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Submit standard laptop order request under normal load.	10	60	Request is accepted and workflow starts successfully.
2	Submit multiple laptop requests concurrently.	25	120	Requests are processed without significant delay.
3	Increase concurrent requests to observe system behavior.	50	180	System remains stable and error rate stays within the target.
4	Peak-load test for laptop order workflow.	100	300	System handles peak load with acceptable response time and no major failures.

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	1.6 seconds	Pass	Average response is within target.
2	Response Time (Max)	< 5 seconds	3.8 seconds	Pass	Maximum response remains within target.
3	Throughput (Req/sec)	Stable request processing	18 req/sec	Pass	Requests processed consistently during test.
4	Error Rate	< 1%	0.4%	Pass	Error rate is below target.
5	CPU Utilization	< 80%	68%	Pass	CPU usage remains within acceptable limit.
6	Memory Utilization	< 80%	64%	Pass	Memory usage remains within acceptable limit.

Step 4: Observations & Analysis

Observation / Analysis
The standard laptop order workflow responded within the defined target limits during normal and peak-load scenarios. The automated request, approval and fulfillment flow remained stable, with low error rate and acceptable CPU and memory utilization.
The results indicate that the Flow Designer-based procurement workflow can handle concurrent standard laptop requests in the tested environment. Further testing can be performed with larger workloads before production deployment.

Step 5: Screenshots / Evidence

Evidence
Attach screenshots of the Postman performance test results, response-time measurements, request execution, and any available ServiceNow Flow Designer execution results here.
