Solution Requirements – Answer

Project Name: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Team ID: SWTID-2026-3426
Date: 15 March 2026

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority
1	Authentication	Users securely log in and access the laptop request process through authorized ServiceNow access.	High
2	Authorization levels	Employee, manager/approver, procurement and asset roles have access according to their responsibilities.	High
3	External interfaces	Use ServiceNow platform capabilities for user, asset/inventory and notification information; support future procurement integrations.	Medium
4	Transactions processing	Process laptop requests, validation, approvals, procurement/fulfillment tasks and status changes automatically.	High
5	Reporting	Generate request status, approval, procurement and fulfillment reports or dashboards.	Medium
6	Business rules, etc.	Only valid standard laptop requests proceed through the automated workflow; required information must be completed before processing.	High
7	Compliance to laws or regulations	Protect user, request and asset information according to applicable organizational privacy and security requirements.	High
8	Other	Send notifications when a request is submitted, approved, rejected, or fulfilled.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	Request submission and workflow actions should complete promptly without unnecessary manual processing.	Fast response and automated processing.
2	Scalability	Support increasing users and laptop requests without redesigning the core workflow.	Workflow remains usable as request volume grows.
3	Security & Data Privacy	Use role-based access and protect request, user and asset information.	Only authorized roles can access relevant data.
4	Reliability & Availability	Workflow should reliably process standard requests and handle expected failures.	Requests are processed consistently with minimal interruption.
5	Usability & Accessibility	Provide a simple request form and clear status/notification messages.	Easy for employees and approvers to understand and use.
6	Other – Maintainability	Flow steps, business rules, approvals and notifications should be easy for administrators to maintain.	Changes can be made without redesigning the whole solution.
